Fire Marshal

## Space Heater Fire Prevention and Home Fire Safety

**About 3,300 Americans die each year** in fires and about 15,700 are injured. Space heaters are the type of heating equipment most often involved in home heating fires, figuring in two of every five of these fires and accounting for 84% of associated civilian deaths, 75% of civilian injuries, and 52% of direct property damage. The Pasadena Fire Marshal's Office wants to remind residents that they can stop the fires before they begin by following these basic fire prevention practices when using space heaters or other alternative heating appliances.

- Space heaters need space. Keep items at least three feet away from each heater.
- Have a three-foot "kid-free zone" around open fires and space heaters.
- Never use your oven to heat your home.
- Have a qualified professional install stationary space heating equipment, water heaters or central heating equipment according to the local codes and manufacturer's instructions.
- When buying a space heater, only buy one with a safety feature that automatically shuts off the power if the heater falls over.
- Carefully follow manufacturers' set up and maintenance instructions.
- Kerosene heaters are not allowed in most places. If you use a kerosene heater, only use the type of fuel listed in the instructions.
- Allow your heater to cool before refueling and only refuel outdoors.
- Keep the fire inside the fireplace by making sure you have a fireplace screen large enough to stop flying sparks and rolling logs.
- Have your chimney inspected at least once a year. Tar build-up inside of the chimney can cause the chimney, roof, and the whole house to go up in flames.
- For wood stove fuel, use only seasoned wood—never use green wood, artificial logs, or trash. Seasoned wood looks dark, or gray when compared to green wood. Seasoned wood is white on the inside.

***Be prepared for a fire:***

- One of the best ways to protect yourself and your family is to have a working smoke alarm that can sound fast for both a fire that has flames, and a smoky fire that has fumes without flames. It is called a "Dual Sensor Smoke Alarm." A smoke alarm greatly reduces your chances of dying in a fire.
- Prepare an escape plan and practice it often. Make sure everyone in your family knows at least two (2) escape routes from their bedrooms.
